MTX Audio Corporation  
4545 East Baseline Rd.  
Phoenix, AZ 85042

To Whom It May Concern:

I am writing this letter as a way of thanking you for the excellent car audio products that you produce in terms of sound quality, build and power. Over the last year, I spent lot of money swapping out different brands of car audio such as Rockford Fosgate, MMATS, Kicker and JL Audio in my car and truck. The car audio products that I switched in both my vehicles were mainly car amplifiers. Many of the amplifiers were either over priced, not working or did not have a combination of the features that I was looking for. I found Rockford Fosgate, MMATS and JL Audio to be very pricey and not worth the extra money that was being paid. Kicker in my opinion used very cheap materials to make their products and the bulk of their products are now made in Korea. No matter which amps I installed for my bass and mids/highs, something was always off and did not sound right.

About 2 months ago it dawned on me to try MTX. I have known about MTX since 1992, when a car audio installer told me that many of his customers preferred MTX over RF because of the increase in power and clarity. I also remembered trying MTX products back in 2001 and for one reason or another, things did not work out. I bought the MTX TA 3404 and TA 5601 amp to fit in my 300zx and automatically my system sounded so much better. The bass was harder powering 2 10 inch 5500's in a ported box and my mids and highs were so much crisper. Those amps replaced 2 kicker amps. In my truck, I decided I would replace both my RF T10001bd with a MTX TA 7801 and for mids and highs replace a T4004 with a MTX TA 3404. That was the best decision that I ever made. Let me tell you that my MTX amps sounded 20% better than my RF amps. Not only are the amps smaller but all of the adjustments and controls are on the top of the amp which makes adjusting the gains, colors and setting so much easier. The sound in my truck is phenomenal and the bass is clear and hits so hard that I could only turn up my 7801 amp one quarter of the way. My 7801 amp powers 2 RF 12 inch T1's in a ported box. In one more month I will be

purchasing 2 15 inch 7500's to put in a sealed box that I have at home. In all of years of being involved with car audio I have never been so impressed with a product as I am with MTX. I consider myself to be a long time car sound enthusiast and I have been involved with car sound since 1989. MTX has a very well deserved reputation and I will be a customer that will continue to promote MTX continually using the fine products that your company offers.

I wanted to just say thank you to MTX for continuing to make excellent car audio products. Both of my vehicles are powered with MTX proudly. The money spent purchasing your products were more than well worth it and I got a 1000% return on my investment in your products.

Sincerely,

Michael J. Hubbard
